

JING-ZHANG TWO ANSWERS

Baseline first. AI must prove itself.

90-second decision brief

Not two plans, but two comparable paths for the same civic task.

5 sec

Read the thesis

The baseline stands alone; AI is optional, stoppable and removable.

30 sec

Read the urban map

One public baseline connects three distinct prototypes and two wings.

90 sec

Trace three paired journeys

T2 / S2 / S7 connect space, responsibility, evidence and exit.

Public data, licence and precision

OSM is low-contrast context, never a survey, redline or statutory control.

ODbL 1.0 · snapshot 2026-08-13 · EPSG:4326 → normalised SVG

Statutory boundary

Not supplied

All red dashed extents are provisional; no area, ownership or road-redline inference.

Performance

Remains unknown

Footfall, energy, efficiency, investment, satisfaction and intensity await field baselines.

Diagnosis: heritage line as public baseline

Translate severance, thresholds and trial risks into six stitches and three proof fields.

Overall urban design plan

On real urban fabric, the spine, stations, wings and 12 nodes form an addressable system.

Integrated land, mobility, rail and blue-green structure

Conventional transit and public space stay primary; AI trials never occupy the only route.

Nine components and typical section

Permanent baseline, removable plug-in and public evidence must be visible in one section.

B01

Continuous step-free path

baseline

B02

Shade, seating and drinking water

baseline

B03

Static wayfinding and staffed service

baseline

Zhongzhiyuan: detailed concept plan

An enclosed test loop and complete public bypass coexist.

Zhongzhiyuan: T2 section, journey and operation

A wheelchair user completes the public bypass before choosing the controlled trial.

Continuous baseline · removable AI boundary · visible evidence and takeover

AI Origin: detailed concept plan

Three step-free paths weave campus, community and enterprise services into a porous hall.

AI Origin: S2 section, journey and operation

International arrivals first use a staffed bilingual desk, then may opt into AI navigation.

Continuous baseline · removable AI boundary · visible evidence and takeover

Dazhongsi: detailed concept plan

Four-quadrant walking and conventional transit stay primary; the low-speed bay is separate and timed.

Dazhongsi: S7 section, journey and operation

Conventional transfer remains complete; AI feeder trials occur only in a bounded time window.

Continuous baseline · removable AI boundary · visible evidence and takeover

Public baseline spine: S4–S6 and six stitches

Culture stops, accessible navigation and climate rest return the proving fields to everyday city life.

Twelve-scenario spatial atlas

All 12 trace to node, components, plan, section, owner and exit asset.

Six profiles and failure fallback journeys

Failure is not an exception; every scenario pre-designs a public fallback.

01

Wheelchair user

Arrive → baseline → opt in → human review → fallback → appeal

02

Pedestrian with visual impairment

Arrive → baseline → opt in → human review → fallback → appeal

03

Older adult without a smartphone

Arrive → baseline → opt in → human review → fallback → appeal

04

Resident and caregiver

Arrive → baseline → opt in → human review → fallback → appeal

05

International researcher and startup team

Arrive → baseline → opt in → human review → fallback → appeal

06

Night operations and maintenance worker

Arrive → baseline → opt in → human review → fallback → appeal

Ecosystem, regional exchange and translation

Research, instruments, manufacturing, compute and civic problems exchange evidence without assuming commitments.

Entities, four phases and asset destinations

Complete the baseline, run controlled trials, then adopt, revise or stop.

0–6 months

Data, audit, public baseline

Advance only after gates pass; exit assets are pre-registered.

6–12 months

Three 1:1 baseline prototypes

Advance only after gates pass; exit assets are pre-registered.

12–24 months

Controlled AI paired trials

Advance only after gates pass; exit assets are pre-registered.

24–36 months

Adopt / revise / stop

Advance only after gates pass; exit assets are pre-registered.

Metrics, sources, risks, gates and unknowns

Known is limited to reproducible coverage; outcome metrics await field baselines.

KNOWN

Value, limits and conditions for deepening

Two Answers is not anti-AI; it gives AI public legitimacy through space, evidence and human accountability.
